## the PAPER MARING PROCESS

Paper comes from trees.

Our Forests

What do you like to do with paper?

Paper with You and Friends

I take the tree branches, strip the bark off and then chip the wood.

Wood Process

Paper is loaded up and delivered to shops and schools.

Paper on an Adventure!

Chips of wood are cooked to make the pulp mixture and then it is bleached.

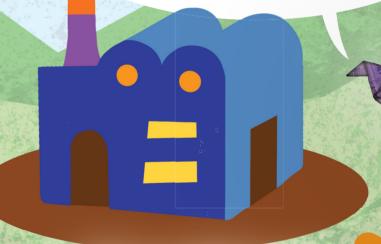

Pulp Time

Paper is smoothed out through heaters and goes onto big rollers. Paper is then cut to any size.

Paper is Ready!

Pulp is sprayed onto mats to make it flat, then the water is squeezed out. Ingredients are added to make coloured paper.

Paper Process

Did you know... we create enough of our own energy for the paper making process and sometimes even extra to give back to the grid!
